

CAPEX detail: % deviation from phase benchmark by scenario (EUS)

- CAPEX onshore pipeline (total, incl. insulation)
- CAPEX onshore pipeline without insulation
- CAPEX booster initial
- CAPEX booster additional

* phase benchmark run (bm_sco2 / bm_dense_2) -- 0% by definition. 'CAPEX onshore insulation' is omitted: its own deviation is undefined for every scenario (both benchmarks predate the insulation feature, so their insulation CAPEX is 0) -- see the 'CAPEX detail' tabs in EUS_full_analysis.xlsx for that row's absolute values instead.
